

Effect of Apeaz Ultra™ on Arthritis Model

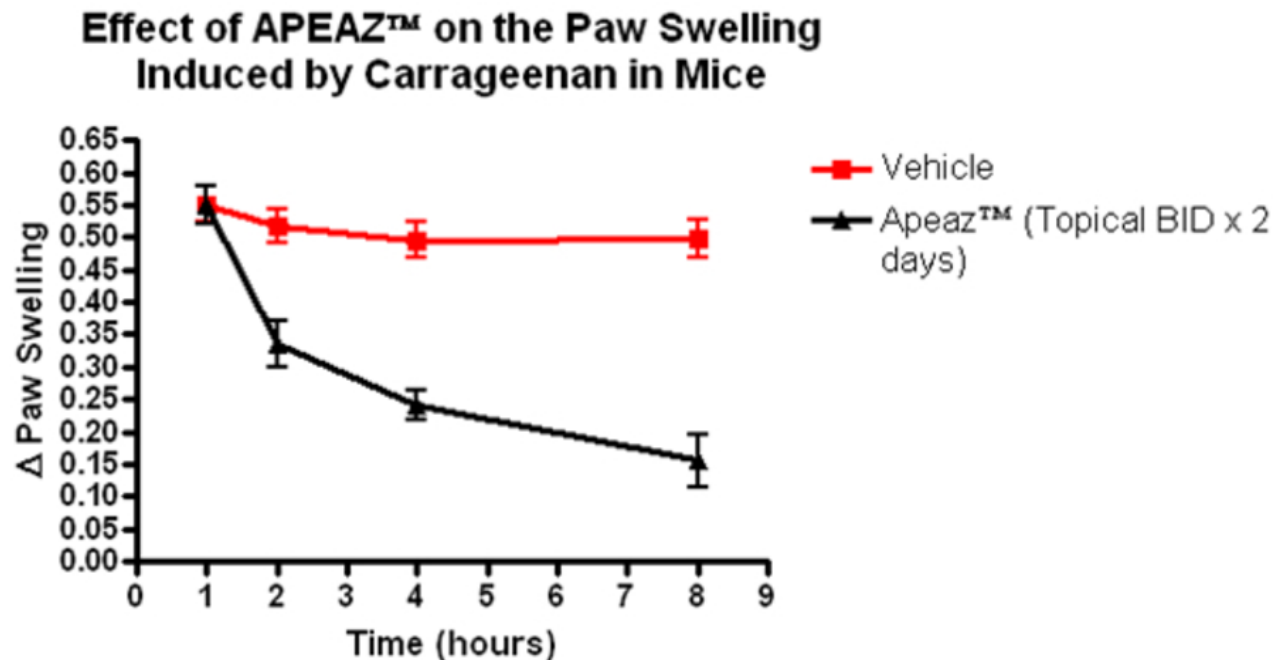

Histopathology and x-ray analysis of joints was performed following topical application of Apeaz Ultra™

- Apeaz Ultra™ was efficacious in decreasing joint swelling and minimizing destruction of cartilage and bone
- Apeaz Ultra™ reduced the levels of inflammatory cytokines in the joints

Effect of Apeaz Ultra™ on Inflammation

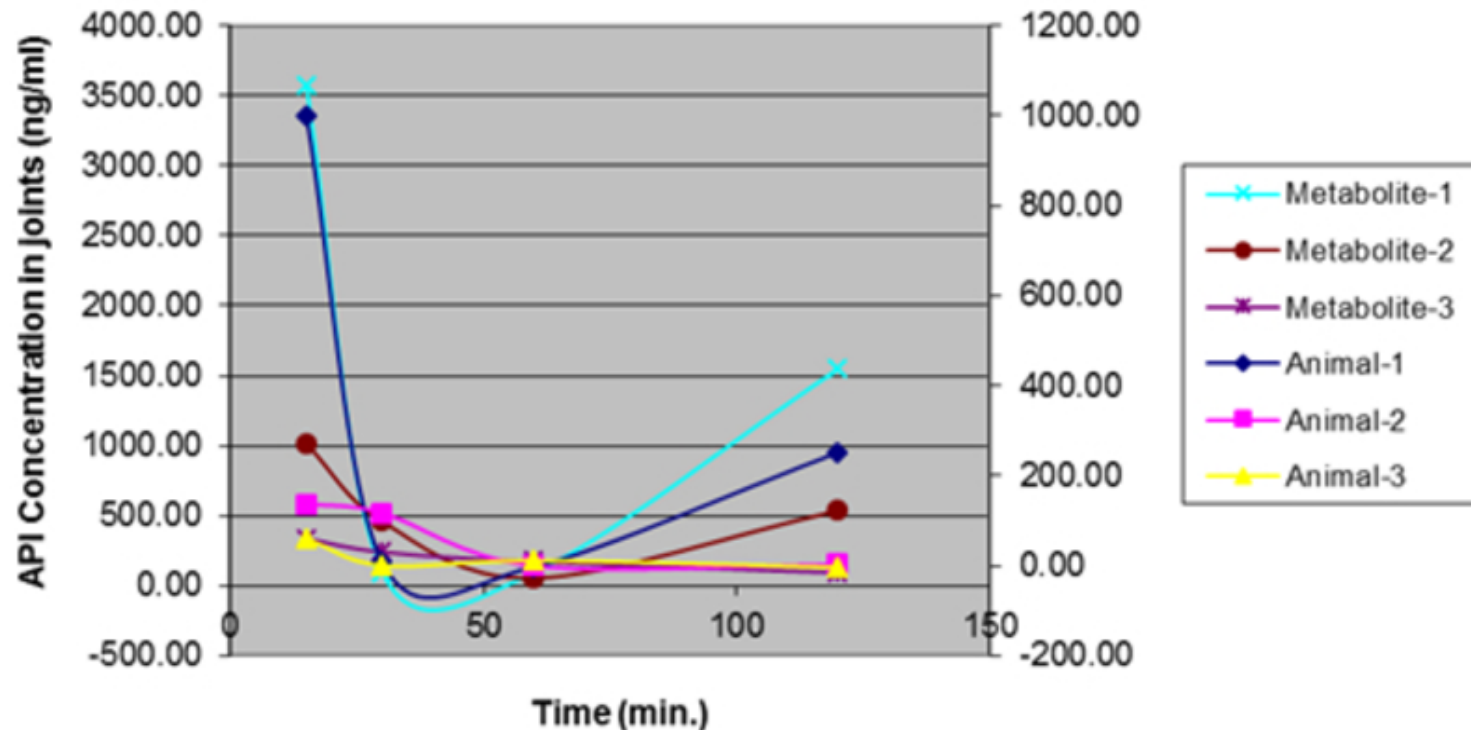

Carrageenan-induced inflammation in the rat or mice paw was used to represent a classical model of edema formation and hyperalgesia

Apeaz Ultra™ significantly decreases swelling induced by inflammation

Joint levels of ingredients

Analytical and quantitative levels of methyl salicylate in the joint of animals was measured following application of Apeaz Ultra™ applied over time

Apeaz Ultra™ provides deep penetration of the active ingredients
